OBJECTIVE

The purpose of this project is to develop useful tools to assess the social impact and the sustainability in an effective manner, and to offer sound criteria to review the current legal framework in an economic recovery context. Likewise, it will be possible to adjust the legal and financial actions accordingly in the future (particularly, the applicable tax incentives and their control). For instance, this research will focus on the labels that certify socially responsible practices for sustainability in two relevant sectors in the economy, both in Spain and at a global level (buildings and forests, in line with the Sustainable Development Goals proposed by the United Nations).
