

# Bachelor in Physics (Academic Year 2024-25)

<b>Astrophysics</b>		<b>Code</b>	800507	<b>year</b>	3rd	<b>Sem.</b>	1º
<b>Module</b>	Fundamental Physics	<b>Topic</b>	General Astrophysics	<b>character</b>	Optional		

	Total	Theory	Exercises
<b>ECTS credits:</b>	6	4	2
<b>Semester hours</b>	45	30	15

<b>Learning Objectives (according to the Degree's Verification Document)</b>
<ul style="list-style-type: none"> <li>• Know the basic techniques of astronomical observation.</li> <li>• Be able to interpret the basic observational parameters.</li> <li>• Understand the different scales and structures in the Universe</li> <li>• Know the main physical properties of stars, galaxies, the interstellar medium, star clusters and galaxies, etc.</li> <li>• Be able to understand the foundations of the standard cosmological model and the observational evidence that supports it.</li> </ul>
<b>Brief description of contents</b>
Introduction to Astrophysics (history, astronomical observation), planets (of the Solar System, extrasolar), stars (the Sun, stellar parameters, stellar evolution), galaxies (the Milky Way, external galaxies), the Universe (structure, cosmology).
<b>Prerequisites</b>
Knowledge of General Physics.

<b>Coordinator</b>	Javier Gorgas García			<b>Department:</b>	FTA
	<b>Office:</b>	00.310.0	<b>e-mail</b>	jgorgas@ucm.es	

<b>Theory/Problems – Schedule and Teaching Staff</b>								
Group	Lecture Room	Day	Time	Professor	Period/ Dates	Hours	T/E	Dept.
<b>B</b>	7	Mo, F	13:30 – 15:00	O'Sullivan, Shane Patrick	Full term	45	T/P	FTA

Office hours				
Group	Professor	Schedule	E-mail	Location
B	O'Sullivan, Shane Patrick		shanepos@ucm.es	04. 211.0

\* 3 h tutorials during the working week through email, virtual campus, etc.

SYLLABUS
<p>I. Introduction</p> <ol style="list-style-type: none"> <li>1. History of Astronomy</li> <li>2. Astronomical Observations</li> </ol> <p>II. Planets</p> <ol style="list-style-type: none"> <li>3. Introduction to the Solar System</li> <li>4. Planetary Physics</li> <li>5. Exoplanets</li> </ol> <p>III. Stars</p> <ol style="list-style-type: none"> <li>6. Stellar Parameters</li> <li>7. Star Formation</li> <li>8. The Sun</li> <li>9. Stellar Evolution</li> <li>10. Stellar Death</li> </ol> <p>IV. Galaxies</p> <ol style="list-style-type: none"> <li>11. The Milky Way</li> <li>12. The Nature of Galaxies</li> <li>13. Dynamics and Evolution of Galaxies</li> <li>14. Active Galaxies</li> </ol> <p>V. The Universe</p> <ol style="list-style-type: none"> <li>15. The Structure of the Universe</li> <li>16. Cosmology</li> </ol>

Bibliography
<ul style="list-style-type: none"> <li>• “<i>Universe</i>”, by R. A. Freedman, R.M. Geller y W.J. Kauffmann III, Ed. W.H. Freeman &amp; Co., 2013.</li> <li>• “An Introduction to modern astrophysics”, by B. W. Carroll y D. A. Ostlie, Ed. Addison- Wesley, 2007.</li> <li>• “Fundamental Astronomy”, by H. Karttunen et al., Ed. Springer, 2007.</li> </ul>
Online Resources
Online resources will be provided through the virtual campus.

Methodology
Teaching is delivered through lectures focusing on the theoretical aspects of the field, and resolution of quantitative exercises.

Evaluation criteria		
Exams	Weight:	70%
A written exam with theoretical questions and quantitative exercises about the material covered in the		

course.		
<b>Other activities</b>	<b>Weight:</b>	30%
Resolution of questionnaires and exercises through the virtual campus and/or in-class exercises.		
<b>Final mark</b>		
<p>The course grade, NFinal, will be determined according to the following plan:</p> <ul style="list-style-type: none"> <li>• <math>N_{Final} = 0.7 \cdot NE + 0.3 \cdot NOA</math> if <math>4 \leq NE \leq N_{Final}</math></li> <li>• <math>N_{Final} = NE</math> if the above condition does not apply</li> </ul> <p>The same NOA will be used in all the calls of the academic year.</p>
