### Main Scientific/Technical Achievements:

During my PhD I was focused on the study of the impact of plasma C3 deficiency in leukocyte biology. We demonstrated that plasma C3 is essential for the development of memory B but not T, lymphocytes, in a plasma level-dependent manner, and showed that very low plasma C3 levels did not associate with lower C3-fragment intracellular expression.

Additionally, as a part of other research interests of our lab, I have participated in the description of other primary immunodeficiencies like one new CD247 deficiency (Marin et al., 2017), and the first Bcl-10 (Torres et al., 2014) and IRF4 (Bravo et al., 2018) deficiencies.

### Interests and medium / long-term aims of research line:

To study the possible roles played by plasma and intracellular complement proteins, particularly C3 and C3 fragments, in lymphocyte development and function, through the samples of patients with complement immunodeficiencies like primary or secondary C3 deficiency. To achieve these aims, we will use cell biology (flow cytometry, immunofluorescence), molecular and biochemical techniques, as well as cultures of immortalized patient-derived T (HTLV-1) and B (EBV) cell lines.

### Expertise:

*Molecular Biology:* PCR, sequencing, electrophoresis.

*Biochemistry:* Western blotting, immunoprecipitation.

*Cell culture:* HeLa, EA.hy926, HUVEC, PBL, HTLV-1, HVS, EBV, Daudi, K562, HPB-ALL, Jurkat, Allogeneic Feeder, CHO, B95.8, OP9.

*Cell biology:* Flow cytometry, in vitro proliferation assays, transfection by electroporation, fluorescence and confocal microscopy, T and B cell immortalization, gene silencing by shRNA knock-down.

*Software:* Office, GraphPad Prism, FlowJo, CellQuest Pro, ImageJ, Endnote, Adobe Illustrator, Adobe Photoshop, Adobe InDesign, SPSS, BioEdit, ChromasPro.

*Databases:* NCBI, Ensembl, HGNC.
