CV SUMMARY

Dr. Jagerovic defended her Ph.D. thesis at the University of Burgundy (France) in 1990. Then she worked as a Research Assistant at the University of California Davis (USA) during two years until she joined the Medicinal Chemistry Institute (Madrid, Spain), with a Marie Curie Fellowship in the program "Human Capital and Mobility", where she was later appointed with a permanent position in 1999. Dr. Jagerovic was technical vice-director of her Institute (IQM) (2015-2019).

Over the last 15 years, her scientific interests are focused on the discovery of modulators of G protein-coupled receptors related to the endocannabinoid system. Her ongoing research support comes from a grant from the Spanish Ministry (RTI2018-095544-B-I00), from the US National Institute of Health (NIH, R01DA045698), and from a biotechnological company (Emerald Health). She has a solid track record in publishing in high impact peer-reviewed journals. Her know-how in technology transfer allowed her to recently license a patent and sign a research contract with a biotech company. She is the director of 5 PhD theses and she currently co-supervises 2 PhD theses. She usually receives national and foreign personnel in training. She very much believes in multi-disciplinary and across institutional collaborative research.
