

SEMINARIO

MAGNETICALLY DRIVEN SMALL-SCALE ROBOTS

Salvador Pané

Institute of Robotics and Intelligent Systems. ETH, Zurich

MIÉRCOLES 3 DE OCTUBRE A LAS 12:00

Departamento de Física de Materiales
Sala de Seminarios, UCM

In this talk I will discuss recent activity at the IRIS electrochemistry laboratory at ETH on the possibility of bridging chemistry and electrochemistry with robotics at small scales. The miniaturization of magnetic (and multiferroic) materials and conductive polymers and hydrogels will be described to create micro- and nanorobots for targeted drug delivery.
