Seminario de Geometría y Topología

Around second Noether's theorem

José Navarro Garmendia (Universidad de Extremadura)

Abstract. In this talk, we will briefly review the so-called Noether's theorems, concerning the relations between symmetries and conservation laws on variational equations.
In particular, I will present a formulation of the second Noether's theorem that is valid on any natural bundle.
If time permits, several examples and further generalizations will be discussed.
