**A nonlocal diffusion problem  
on manifolds**

**María del Mar González  
(Universidad Politécnica de Cataluña)**

**Resumen:**

We consider a nonlocal diffusion problem on a manifold. This kind of equations can model diffusions when there are long range effects and have been widely studied in Euclidean space. After considering existence and uniqueness of solutions, we concentrate on the long time behavior, both on compact and noncompact manifolds. For the model case of hyperbolic space we find a different and interesting behavior. This is joint work with C. Bandle, M. Fontelos and N. Wolanski.
