## Duality theories and factorisation for classes of multilinear operators

### Resumen:

We discuss theories of duality relating to certain classes of multilinear or multilinear-like operators on Banach spaces and Banach lattices. These theories relate to pointwise factorisation of functions in certain function spaces and also to the Maurey--Nikishin--Stein theory of factorisation of operators. A variety of techniques is involved, including minimax arguments involving the dual space of  $L^{\infty}$ . Many open questions remain.

This is joint work, partly with Timo Hanninen and Stefan Valdimarsson, and partly with Michael Tang.
